

YINUO (ZOE) ZHOU

213-712-2204 | yinuoztech@gmail.com | linkedin.com/in/crispyinuo | yinuozhou.com

Education

University of California, Berkeley

Aug 2023 – May 2024

Master of Engineering: Electrical Engineering and Computer Sciences (GPA: 3.99/4.0)

Berkeley, CA

- Track: Visual Computing and Computer Graphics | Courses: VR & Immersive Computing, Computer Graphics, Computer Vision

University of Southern California

Aug 2019 – May 2023

Bachelor of Science: Computer Science and Business Administration (GPA: 3.87/4.0)

Los Angeles, CA

- Minors in Mobile App Development and Songwriting | Course Producer for CSCI 310 (Software Engineering)

Experience

Luma AI

Jun 2026 – Present

Software Engineer (Full-Stack)

Redwood City, CA

- Led engineering on Mini Apps for Luma's AI image and video generation platform: one-click creative tools like Camera Angles and Relight, taken from prototype to paid launch in 1.5 weeks.
- Built out Luma's connector platform so creators move generated images and video between the AI canvas and Google Drive, Dropbox and Frame.io, via agent tools, streamed exports and one shared OAuth connect flow.
- Scoped and built custom MCP connectors end to end, letting users plug any remote MCP server into the AI agent: OAuth discovery with dynamic client registration, authless servers, and the stateless MCP wire format.
- Designed the MCP security model: DNS-rebinding-safe SSRF guard, Redis sliding-window rate limiting, and cross-server taint tracking against prompt injection.
- Integrated multilingual text-to-speech (Seed Audio) end to end, with 20 voices and usage billing on generated audio duration.

Meta

Jul 2024 – May 2026

Software Engineer (Facebook Ads)

Menlo Park, CA

- Serve as Workstream Lead for the Facebook Lightweight Ad Creation interface — independently driving end-to-end product execution across ideation, scoping, PRD authoring, rapid prototyping, and launch; conducted data analysis using SQL queries to measure experiment impact, validate hypotheses, and inform roadmap prioritization.
- Shipped Click-to-Messenger ad features that drove ~\$2M in incremental ads revenue, directly increasing advertiser adoption.
- Delivered end-to-end web and mobile solutions using JavaScript, PHP, GraphQL and React; partnered cross-functionally with product, design, DS, and ML teams to prioritize the highest-impact experiments and ship product.
- Leveraged AI coding agents (Claude Code, etc.) extensively to manage 7-8 concurrent workstreams simultaneously, dramatically accelerating iteration speed and enabling high-quality delivery across a large project portfolio.

Apple

May 2023 – Aug 2023

Software Engineer Intern (Apple Maps)

Cupertino, CA

- Built an internal Vue.js/Solr web app for searching and managing Points of Interest, adopted company-wide for map data operations.
- Ran user interviews and redesigned key workflows, cutting clicks for common tasks by 50%; added map layers with drawing and spatial search.

OpenARK Lab, FHL Vive Center for Enhanced Reality, UC Berkeley

Jun 2023 – May 2024

Frontend Developer & Algorithms Researcher

Berkeley, CA

- Led DTTDNet development, fine-tuning 3D localization to 85% tracking accuracy on a digital-twin RGB-D dataset captured with ZED2 cameras.
- Built a HoloLens 2 AR interface for Leo Rover's Martian exploration using Unity and Mixed Reality Toolkit.

NextPlate (Startup)

May 2022 – Dec 2022

Software Engineer

Los Angeles, CA

- Designed and built help center client and admin portals in Figma, React, Next.js and Node.js, used by 50+ restaurants including Subway and Jersey Mike's.

Projects

Nombook (iOS App) | Swift, SwiftUI, SwiftData, CloudKit, Vision

Sep 2026

- Solo-built and launched a free recipe book and meal planner in 7 languages, reaching thousands of App Store downloads.
- On-device OCR recipe import from photos and URLs; serverless and account-free, with private iCloud sync.

Harmony Blocks (VR Game) | Unity, C#, Ultraleap SDK, Blender

Nov 2023

- Built a VR music sandbox with hand-tracked physics hands; won 1st Prize at Stanford's Immerse The Bay hackathon.

ThirdEyeTarot (iOS App) | Swift, ChatGPT API

Jan 2023 – May 2023

- Built an iOS app that generates personalized AI tarot readings from users' questions.

Wheel Of Dinner (iOS App) | Swift, MapKit, CoreLocation, Firebase, Yelp API

Sep 2022 – Dec 2022

- Built and launched an iOS app that helps indecisive users pick a nearby restaurant, with map-based search.

Food Saviour (Mobile/PC Game) | Unity, C#

Sep 2022 – Dec 2022

- Built a 3D Unity game in a procedurally generated Mars maze, with NavMesh AI agents that pathfind to chase the player.

Technical Skills

Languages: TypeScript, JavaScript, Python, Swift, PHP, GraphQL, SQL, Java, C#, C++, HTML/CSS

Frontend: React, Next.js, Vue.js, SwiftUI, tldraw, responsive & mobile web, accessibility, i18n

Backend & Data: Node.js, PostgreSQL, Redis, Temporal, AWS S3, OAuth 2.0, MCP, Docker, PostHog, Statsig, Figma

Mobile, Graphics & XR: SwiftData, CloudKit, ARKit, RealityKit, Unity, Unreal, OpenGL, OpenCV
